

MARKERS, INC. NEW Flex-Tension Outfield Fence

featuring Pocket-Net™ Technology

For easier installation, pockets are located every 3 inches to secure the fence to each support pole.

FlexTension Fence Kit #FT160-19 includes:
160 ft Pocket Net Fence, 5 Stabilizing Poles,
14 Flex Poles, Installation Accessories

FlexTension Fence Kit #FT160-19-DLUX includes:
160 ft Pocket Net Fence, 5 Stabilizing Poles, 14 Flex Poles,
Installation Accessories, 19 Ground Sockets

YOU MAY ALSO NEED THE FOLLOWING TOOLS:

Tape Measure • String • Chalk or Spray Paint • Mallet or Drill • Sharp Scissors (if cutting is required)

A - Lay out fence line

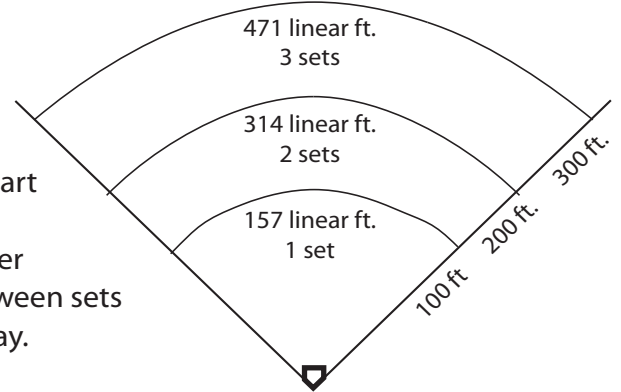

Using tape measure lay out the radius. Chalk or paint the line where fence will be installed.

B - Mark pole locations

Starting at foul line, mark 19 pole locations approx. 8.5 ft. apart **for each 160 ft. set.**

Note: If using multiple sets, mark end locations close together between each set. You can allow for openings 2 ft. wide between sets for a gateway, or keep them close for a fence with no gateway.

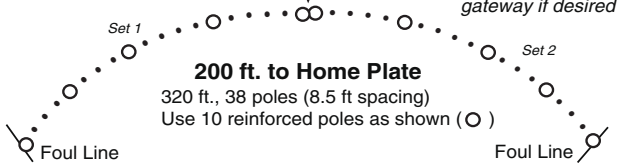

(see 3 diagrams below)

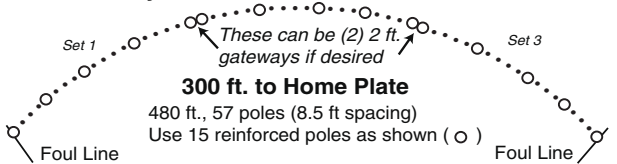

1 Set Pole Layout

2 Set Pole Layout

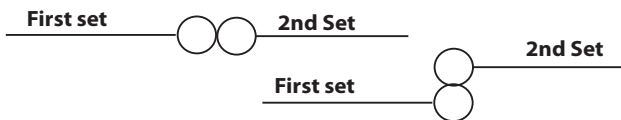

3 Set Pole Layout

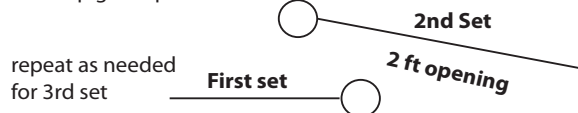

Suggested positions when installing 2 or more fence rolls (L-R)

A - Continuous run - set end poles side by side or tight overlap

B - Overlap gate - pass-thru.

Installing Poles / Ground Sockets

ALWAYS Make Pilot Holes

Drive Pilot Hole Tool into ground with hammer or rubber mallet.

Gently tap Pilot Hole Tool from right to left to loosen & remove from ground.

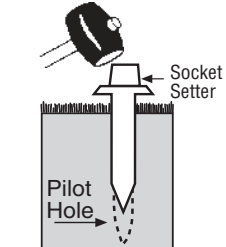

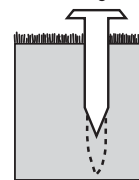

Hint:
For Faster Work, Drill Pilot Hole using our optional Auger - 1" dia. x 10" deep.

Use Rubber Mallet on posts!

Installing Fence Poles directly into pilot hole

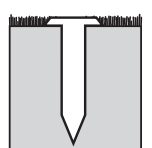

Ground Sockets

Push Socket as far as you can into ground.

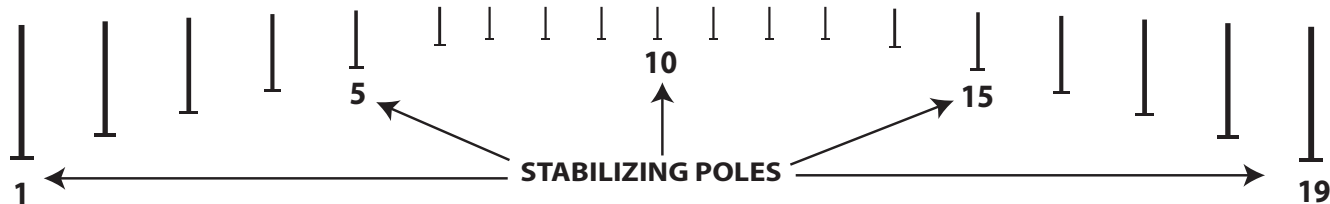

Use the supplied Socket Setter and drive Ground Socket into the ground.

Make sure the Socket is flush with the turf line.

Insert fence Pole into socket

After all Pocket Poles are installed...

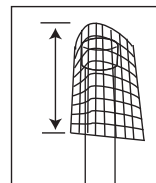

Installing your Pocket-Net™ fencing is this easy!

Start at foul line

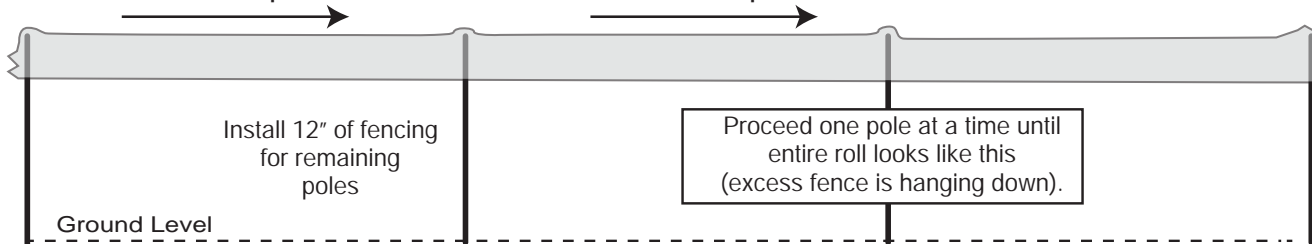

- A** Find the first opening or “post pocket” by running your hand along the bottom edge of the fence material; pull pocket open.
- B** Raise the fence open pocket and slide the material approximately 12 inches over the post and cap combination. (Remaining material can be loosely draped over for now.)
- C** Stretch the material to the next post, locate the nearest pocket and repeat Steps A-B for all posts.

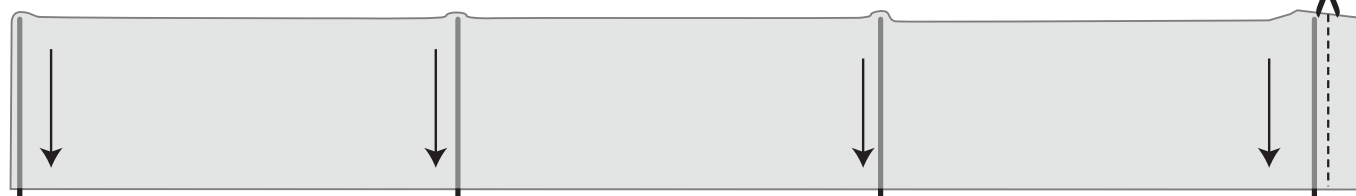

Gathering material 12” at the top of each pole will make it easier to stretch the material to the next one in line.

PULL TIGHT to next pocket

PULL TIGHT to next pocket

- D** Once you have successfully attached all of the required pockets, the material can be pulled down to the bottom end of each post. For best appearance, confirm that the fence is tightly stretched between each post and does not sag. *Any excess fencing can be easily cut with sharp scissors.*

It's as easy as pulling on socks!

It's easy to replace damaged Pocket Net™ Fence
